

Humanitarian Design *Challenge*

**Rethinking Sanitation,
Restoring Dignity**

THE HUMANITARIAN DESIGN CHALLENGE

Kenya
Red Cross

CROIX-ROUGE
FRANÇAISE

**Rethinking Sanitation
Restoring Dignity**

Why this *challenge?*

**Sanitation is a matter of
health, dignity, and
gender equality.**

- Millions live in overcrowded camps
- Current latrines are often:
 - ◆ expensive
 - ◆ non-durable
 - ◆ undignified
- High population pressure at Kakuma

Expected *impact*

**Human, environmental,
and social impact.**

- Improve dignity, user safety and accessibility (gender)
- Transform waste into useful resources to reduce environmental impact
- Provide open, replicable solutions

The design *challenge*

**A latrine as a user
experience**

- You are NOT redesigning the toilet bowl
- Focus on:
 - walls
 - structure
 - usage
 - experience
- Privacy, light, ventilation, safety, heat, waste (hygiene products)

Understanding *the camp context*

**Design for real context,
not abstract**

- Over 300,000 people
- 20+ nationalities, 300+ tribes
- Latrines shared by up to 15 people
- Cultural, religious, and gender considerations

Details in the annex 5 of the
Brief_and_Specifications
document

— — —

WASH & *dignity*

Design can improve
daily life

- Sanitation = health + dignity
- Long queues, hygiene, safety issues
- Critical for women and children

Materials & *resources*

**Design with existing
resources**

- Available waste:
 - plastics (PET, HDPE, PP)
 - textiles
 - wood
 - Fabrication possible via local FabLab in Mombasa
 - <https://www.iome.ke/>
- Details in the annex 2 & 3 of the Brief_and_Specifications document
- — —

Standards & *constraints*

**Responsible and
realistic design**

- Follow humanitarian standards ([Sphere standards](#))
- Hygiene, safety, accessibility
- Non-toxic, durable materials

Evaluation *criteria*

**The jury is not looking
for perfect projects**

- **Humanitarian relevance**
Does it really improve safety, privacy and dignity in camp settings?
- **Creativity & originality**
Is the idea innovative, clever, and meaningful?
- **Sustainability & circular thinking**
Does it reduce waste and reuse available materials?
- **Feasibility & cost-efficiency**
Can it realistically be built, maintained and scaled?
User experience & cultural sensitivity
Is it accessible, inclusive and respectful of local norms?
- **User Experience & Comfort /** Is the design accessible, comfortable, and culturally sensitive?
- **Adaptability**
Can the solution be reused or adapted to other contexts?

Requirements & *call to action*

Design for dignity

Design for impact

- Students, designers, engineers, makers
- Deliverables: concept, visuals, material sheet, optional prototype (any scale)
- **Deadline: February 28, 2026**

Q&A

The floor is yours

INFOPACK

Humanitarian Design

Challenge

03 février 2026

**CROIX-ROUGE
FRANÇAISE**

What is *an emergency situation ?*

Common features:

Urgency + duration

Health crises

Uncertainty

Cultural and social complexity

Natural disasters

Armed conflicts

Forced displacement

Long-lasting crises

CROIX-ROUGE FRANÇAISE

**An operational actor
working directly with
affected populations**

- Part of the International Red Cross and Red Crescent Movement
- Humanitarian organization acting in France and internationally
- **Core missions:**
 - ◆ Emergency response
 - ◆ Health & autonomy
 - ◆ Social inclusion

— — —

Our role

in humanitarian response

**Every decision has real
human consequences**

- Act fast, often in unstable and uncertain contexts
- Respond to basic needs: water, sanitation, shelter, health, protection
- Work with strong constraints:
 - ◆ limited time
 - ◆ limited resources
 - ◆ complex logistics

very short

Global context

of the humanitarian sector

**Crises are becoming
more complex and
unpredictable**

**Standardized solutions
often reach their limits**

What design can do in emergency situations ?

CROIX-ROUGE
FRANÇAISE

What design can do in **emergency situations ?**

- put people at the center
- optimize scarce resources
- adapt solutions to context

What design can do in emergency situations ?

- put people at the center
- optimize scarce resources
- adapt solutions to context

What is emergency design ?

- a human-centered and co-design approach
- focused on simple, robust, contextual solutions
- responding to vital needs during crises

Key principles:

- frugal innovation (do more with less)
- fast deployment and replicability
- local adaptability (resist real-life use)

What design *can change ?*

**Simple ideas,
real life impact**
